- ❖ Inden indsendelse til overvågning på SSI, bør screenes for biotype 1a
 - Biotypereaktioner (1a som den eneste Salicin/Eskulin positiv)
 - PCR (flere publikationer, skal sættes op lokalt)
 - MaldiTof (litteratur ser lovende ud, skal sættes op og valideres lokalt)
- ❖ Alle de resterende typer indsendes til SSI og vi gemmer, typer og svarer ud i LIMS
- ❖ Disse data indgår også aktivt i overvågningen og i forbindelse med udbrud – både lab- og epi-afdelingen
