

# Detection of resistance genes and typing of bacteria based on whole genome sequencing (WGS)

**Henrik Hasman**  
**DTU -Food**

# Research group for bacterial genomics and antimicrobial resistance

- Reference laboratory for DK, EU and WHO
- Surveillance (Global detection and control)
- Various *ad hoc* research projects

# The Challenge

*Is to:*

- Continue to increase the power of surveillance and diagnostic using molecular tools
- Develop sequenced-based diagnostics that can be used as close to the patient as possible

Google maps

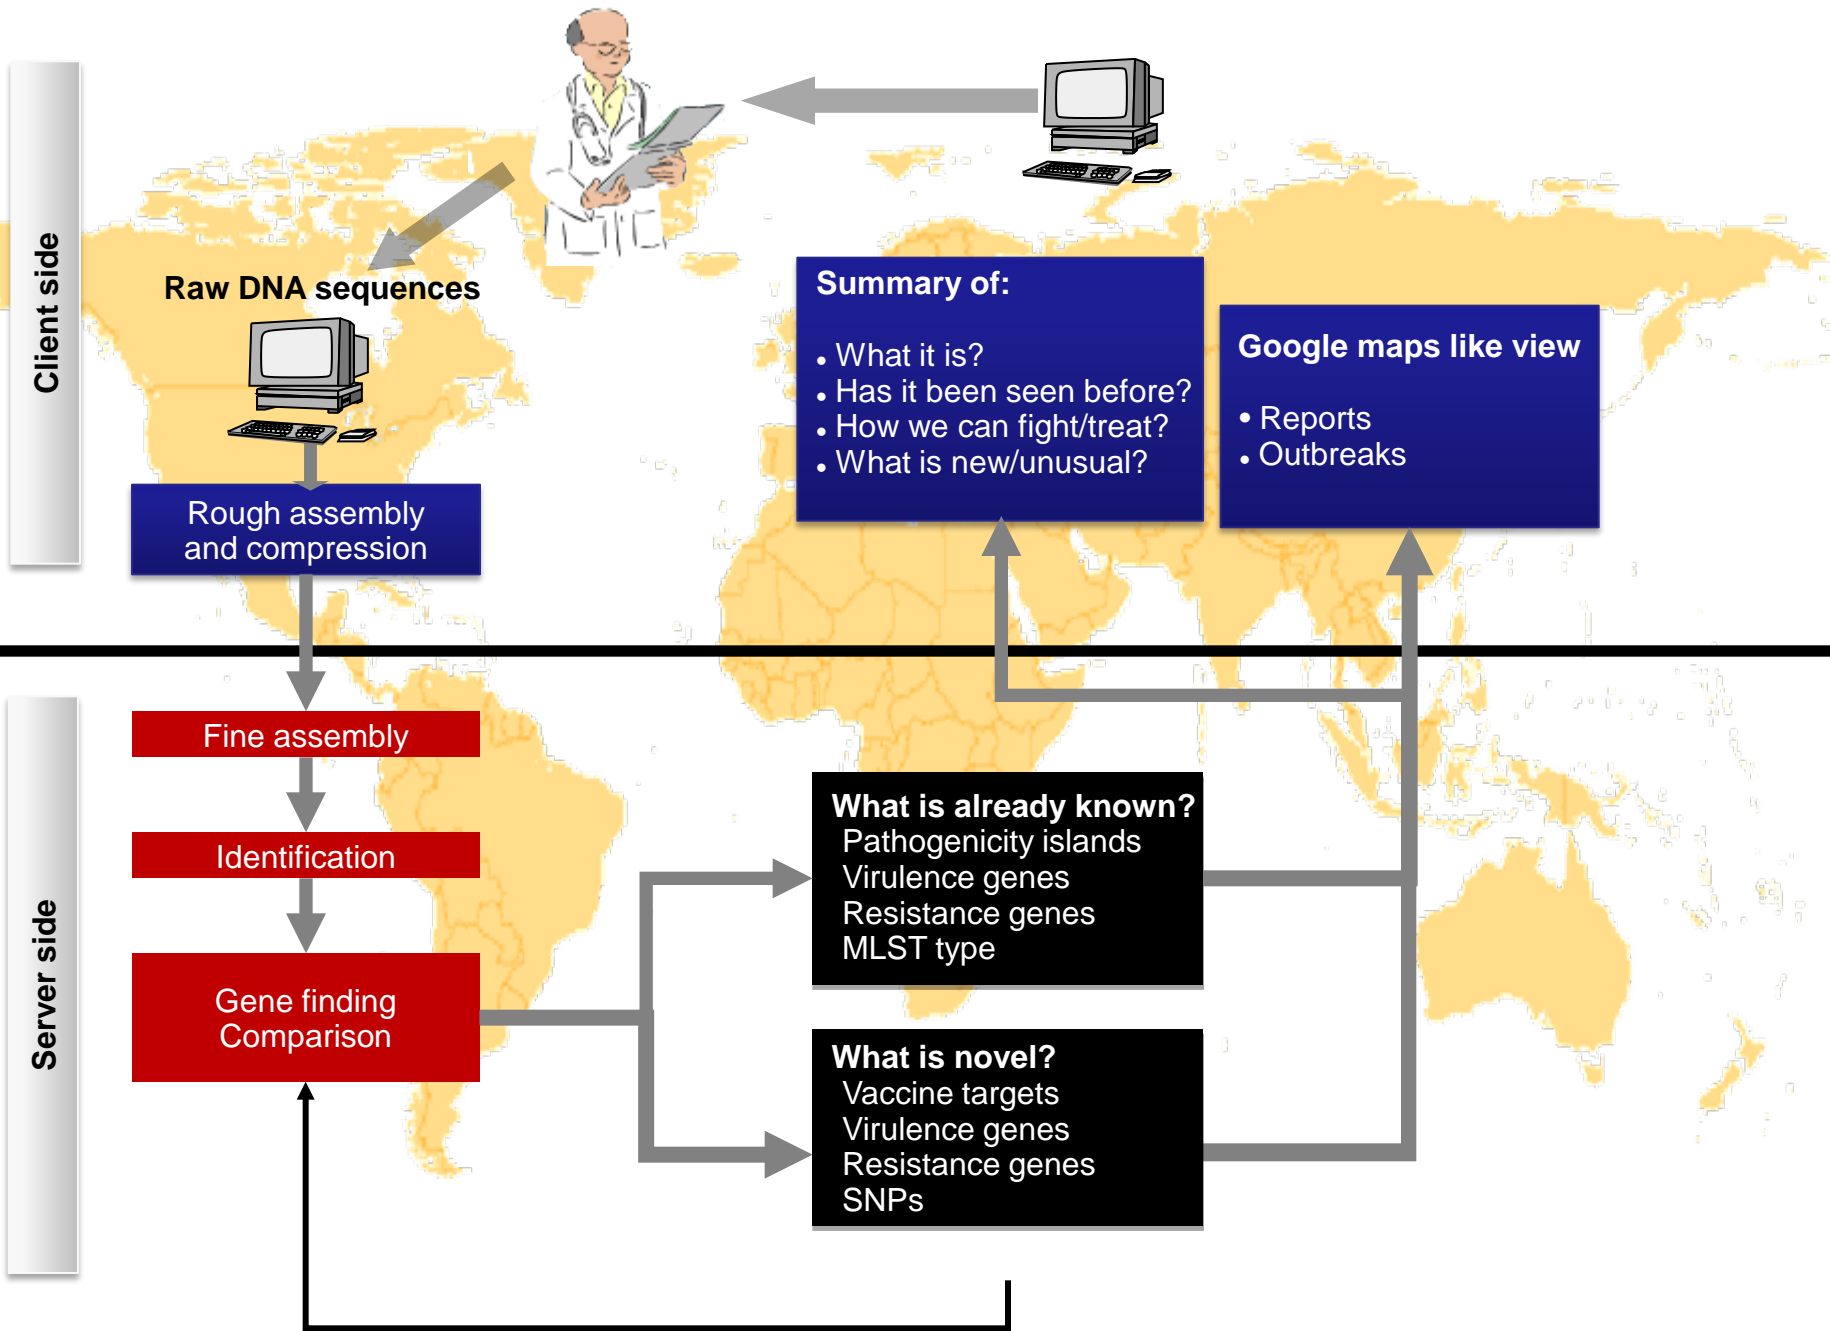

# Center for Genomic Epidemiology (CGE)

# Purpose of CGE

- Provide a proof of concept of combining bioinformatics with both local diagnostics and global epidemiology in real-time

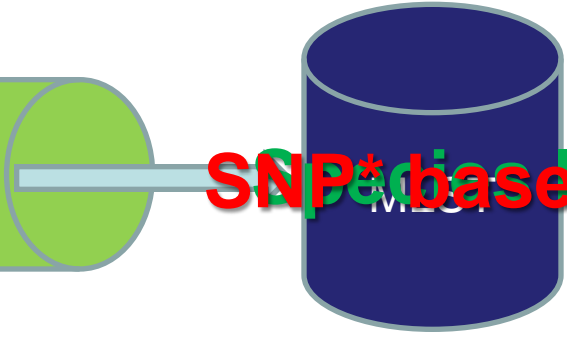

1G bases

3-5M bases

- Allele 1
- Allele 2
- Allele 3
- Allele 4 (O<sub>15</sub>-48)
- Allele 5

resistance phenotype  
virulence genes

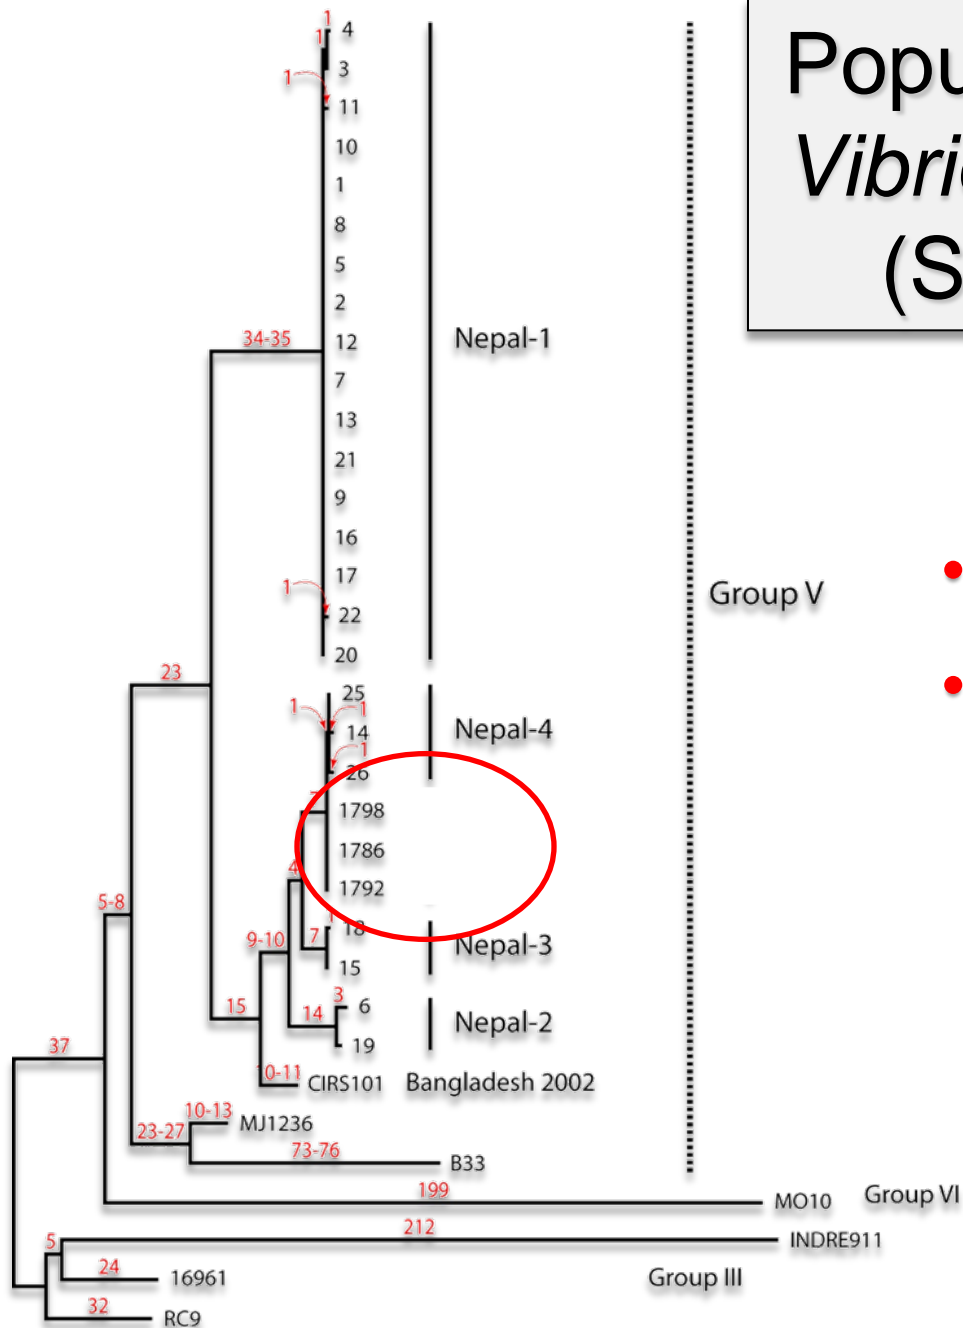

\*SNP – Single Nucleotide Polymorphism (extreme MLST)

EPIDEMIOLOGY

# Population Genetics of *Vibrio cholera* in Nepal (SNP-based tree)

- 24 *V. cholera* Genomes
- 2 major Nepalese Clades
  - Nepal-1 has low diversity

## VTEC O104:H4 outbreak strain

# MLST Results

Sequence Type: **ST-678**

## SETTINGS:

Organism: *Escherichia coli*

MLST Profile: *ecoli*

Genes in MLST Profile: 7

Locus	%Identity	Allele Length/HSP Length	Gaps	Allele
<i>adk</i>	100%	536/536	0	<i>adk-6</i>
<i>fumc</i>	100%	469/469	0	<i>fumc-6</i>
<i>gyrb</i>	100%	460/460	0	<i>gyrb-5</i>
<i>icd</i>	100%	518/518	0	<i>icd-136</i>
<i>mdh</i>	100%	452/452	0	<i>mdh-9</i>
<i>pura</i>	100%	478/478	0	<i>pura-7</i>
<i>reca</i>	100%	510/510	0	<i>reca-7</i>

# Examples – MLST and Resfinder

## ResFinder 1.1 Server (Acquired antibiotic resistance gene finder)

ResFinder 1.1 identify acquired antibiotic resistance genes in total and partial sequenced isolates of bacteria. The input sequence must be in one-letter nucleotide code, [Test sequence](#)

## VTEC O104:H4 outbreak strain

# Results

## ResFinder Results

Resistance gene				
<b>Aminoglycoside</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
<i>strA</i>	100.00%	804/804	Aminoglycoside resistance Alternate name; aph(3 <sup>+</sup> )-Ib	<a href="#">AF321551</a>
<i>strB</i>	100.00%	837/837	Aminoglycoside resistance Alternate name; aph(6)-Id	<a href="#">FJ474091</a>
<b>Beta-lactam</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
<i>C-M-15</i>	100.00%	876/876	Beta-lactamase resistance Alternate name; UOE-1	<a href="#">DQ302097</a>
<b>Fluoroquinolone</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
No resistance genes found.				
<b>MLS - Macrolide-Lincosamide-StreptograminB</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
No resistance genes found.				
<b>Phenicol</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
No resistance genes found.				
<b>Sulphonamide</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
<i>sulI</i>	100.00%	840/761	Sulphonemide resistance	<a href="#">AY224185</a>
<b>Tetracycline</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
<i>tet(A)</i>	100.00%	1200/1200	Tetracycline resistance	<a href="#">AJ517790</a>
<b>Trimethoprim</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
<i>dhfrA7</i>	100.00%	474/474	Trimethoprim resistance	<a href="#">JF806498</a>
<b>Glycopeptide</b>				
Resistance gene	%Identity	Gene Length/HSP Length	Phenotype	Accession number
No resistance genes found.				

# Antimicrobial susceptibility

## Phenotypes vs genotypes

### Phenotyping

#### **Pro's:**

Relatively fast

Easy

Cheep

Can detect new phenotypes

#### **Con's:**

Not always fast enough (hence empiric treatment)

Require that the bacterium can grow in the lab

Influenced by “the human factor” and by biological variation

No breakpoint consensus (CLSI vs EUCAST)

# Antimicrobial susceptibility

## Phenotypes vs genotypes

### Genotyping

#### Pro's:

- Can be used for many other purposes (e.g. outbreak investigation)
- Can cover all relevant (known) resistance genes
- Can detect genes with heterogeneous expression (e.g. *mecA*)
- Can be combined with phenotypes to detect new genes
- Can properly be used directly on clinical samples (sputum, blood, urine ect.)

#### Con's:

- Still relatively expensive (~1000 Dkr/strain)
- Require high level of skills and new equipment
- Does not detect new genes automatically
- Require the ability to generate “plain language reports”
